

SAP ABAP Mini Projects

1. Leave Management System

Project Overview: This project helps employees apply for leave and allows managers to approve or reject leave requests.

Why Students Should Learn This Project: Students will learn how real companies manage employee leave records.

Tables Used

- **ZEMP_MASTER:** Stores employee basic details like Employee ID, Name, and Department.
- **ZEMP_LEAVE:** Stores leave application details such as leave dates and approval status.

Main Functionalities

- Employee can apply for leave.
- Manager can approve or reject leave.
- Generate leave balance report.

ABAP Concepts Covered

- ALV Reports
- Date Calculations
- Validation Logic
- Module Pool Basics

Cleancode

2. Inventory Management System

Project Overview: This project tracks stock inward and outward transactions in a company.

Why Students Should Learn This Project: Students understand how warehouses and inventory systems work in industries.

Tables Used

- **ZMATERIAL_MASTER:** Stores material details like Material ID and Material Name.
- **ZSTOCK_TRANS:** Stores stock transaction details such as inward and outward quantity.

Main Functionalities

- Add new materials.
- Record stock inward entries.
- Record stock outward entries.
- Display current stock report.

ABAP Concepts Covered

- Internal Tables
- ALV Reports
- FOR ALL ENTRIES
- Stock Calculation Logic

Cleancode

3. Online Examination System

Project Overview: This project manages student marks and generates result reports.

Why Students Should Learn This Project: Students learn result calculation and report generation concepts.

Tables Used

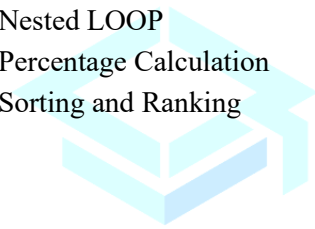

- **ZSTUDENT:** Stores student basic information.
- **ZMARKS:** Stores subject-wise marks of students.

Main Functionalities

- Enter student marks.
- Calculate percentage.
- Generate marksheet.
- Assign grades.

ABAP Concepts Covered

- Smart Forms
- Nested LOOP
- Percentage Calculation
- Sorting and Ranking

Cleancode

4. Vendor Invoice Management System

Project Overview: This project manages vendor invoices and tracks payment status.

Why Students Should Learn This Project: Students understand invoice processing and vendor management used in SAP MM/FI modules.

Tables Used

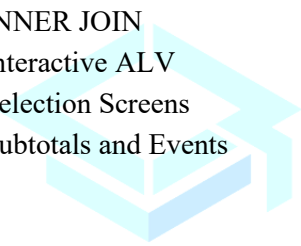

- **ZVENDOR:** Stores vendor details.
- **ZINVOICE:** Stores invoice details and payment status.

Main Functionalities

- Create vendor invoice.
- Display pending invoices.
- Display paid invoices.
- Generate vendor-wise summary report.

ABAP Concepts Covered

- INNER JOIN
- Interactive ALV
- Selection Screens
- Subtotals and Events

Cleancode

5. Student Fee Management System

Project Overview: This project manages student fee payments and pending balances.

Why Students Should Learn This Project: Students learn financial transaction handling and receipt generation.

Tables Used

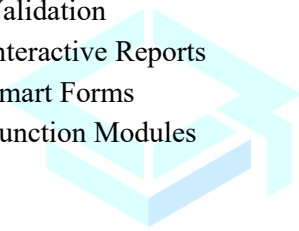

- **ZSTUDENT:** Stores student details and course information.
- **ZFEE:** Stores fee payment details.

Main Functionalities

- Collect student fees.
- Generate fee receipt.
- Display pending fee report.
- Generate course-wise fee analysis.

ABAP Concepts Covered

- Validation
- Interactive Reports
- Smart Forms
- Function Modules
